ELECTRIC STOVE AND INSERT RANGE

With thirty years experience designing some of the world's finest woodburning and multifuel stoves, we are pleased to offer the award winning range of ACR premium quality electric stoves and inserts.

As our lives become ever more hectic and our homes more efficient, it may not always be practical to install a real traditional woodburning stove.

Our innovative electric stoves now offer you similar ambience and enjoyment.

Designed and engineered from the ground up to meet the needs of modern room heating, we have used our extensive expertise with stove manufacturing to create a range of truly ingenious electric stoves and inserts.

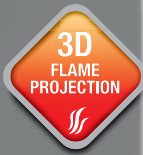

We construct our electric stoves and inserts from premium grade lightweight steel, beautifully finished in a black powder-coat finish, for an authentic look and feel. This also makes the stoves and inserts incredibly durable, as such they all come with a two year warranty as standard.

Our electric stoves and inserts are equipped with some of the most

advanced technology available featuring LED 3D holographic projection. This creates an incredibly realistic appearance of flickering flames in the front, centre and rear of the fuel bed. With four whisper quiet settings - high flame, medium flame, low flame and smouldering embers, there will always be a setting to suit your mood.

All stoves and inserts have two heat settings (please see individual product pages for specifications) to provide instant heat with thermostatic control and the convenience of a seven day timer, all adjustable from the fully programmable remote control. Or in the case of the fireplace inserts by using the ACR App on your smart device. There is also an option for the flame effect only with no heat. Our insert range also features sixteen lighting options as standard to suit your mood and room ambience.

For thoroughly modern homes and living, our range of electric stoves and inserts really do offer the best of traditional and contemporary, with all the convenience you could hope for.

All of our electric stoves and inserts feature LED 3D holographic flame projection for an ultra-realistic fire effect.

'Flame Projection Technology'* creates flames in front, centre and rear of the fuel bed.

There is also an additional switchable option of a blue flame to add further ambience to our electric stoves range, and 16 selectable flame colourways for our inserts range.

The effect can be adjusted from a soothing glow through to a welcoming log fire.

*Patent applied for.

To see our electric stoves in action, please scan the QR code.

To see our electric inserts in action, please scan the QR code.

The PR-600e, PR-900e and PR-1200e all feature 64 different effect options - including coloured flame effects, high flame, medium flame, low flame and smouldering embers only. All adjustable from the supplied intelligent remote control or the downloadable ACR App.

Essential insert and stove information

INSERT AND STOVE CONSTRUCTION

Our range of electric stoves and inserts are manufactured from lightweight, but durable steel and finished in a traditional black powder-coat, to keep them looking their best for many years. As electric stoves do not reach the very high internal temperatures of a woodburning stove there is no need for cast iron or heavyweight steel components. This means our stoves are lighter in weight, but still retain the look and feel of a real stove and offer much greater durability than similar products.

THE ELECTRIC FIRE EXPERIENCE

Featuring incredibly realistic LED 3D holographic flame projection, with an additional blue flame option and four settings - high flame, medium flame, low flame and a smouldering embers effect, our stoves really do have that real fire ambience. LED lighting ensures longevity and lower running costs. Realistic ceramic logs resting on a bed of crystals give the appearance of glowing embers and further adds to the atmosphere. Each stove and insert has two selectable heat settings (please see each model for actual heat outputs) - and also a no-heat setting so you can still enjoy the flame effect on warmer evenings or for when no additional room heating is required.

Our insert range also features sixteen options for lighting and flame colour, all selectable from the multifunction remote control supplied as standard or by using the downloadable ACR App.

All of our electric stoves and inserts feature a thermal cut-out safety device to protect the appliance from over-heating.

PUTTING YOU IN CONTROL OF YOUR INSERT AND STOVE

All of our stoves and inserts are supplied with a convenient 2-in-1 intelligent remote control. All the day-to-day functions, such as turning the stove on and off and adjusting the flame effect settings, are directly accessible with an LED screen to show your chosen settings. Slide open the lower section of the handset to reveal the programmable seven day timer facility with a three settings per day timer and fully adjustable thermostatic control. All our stoves also feature onboard controls for turning the stove on and off and for adjusting the heat and flame effect settings too.

Our insert range can also be controlled with the ACR App when installed on your smart device, giving you even greater flexibility to tailor your fire to suit your needs and mood.

2 YEAR WARRANTY

Designed and engineered to the highest standards we pride ourselves on offering a premium quality electric stove experience, this is fully backed up by our extensive two year warranty for your peace of mind. Full warranty details & exclusions can be found on our website <https://acrheatproducts.com/warranties>

INSTALLATION INFORMATION

Our electric stove and insert range offers incredible realism and heat from just the flick of a switch. In most instances, you can simply plug in and you're up and running, but please note that clearances to combustibles must be observed and a hearth may be required. Please consult your ACR dealer for further information if you are unsure.

STOVE ACCESSORIES RANGE

A range of specially designed accessories are also available to enhance your electric stove installation. With gloss black hearth plates for wall and corner settings and matching flue pipe kit suitable for all of our electric stoves, there is also a gloss black top plate and storage base plinth available exclusively for the NEO range and a log store base option for the Malvern. Please see page 26 for further details.

INSERT FIRE-SURROUNDS

Our insert range of electric fires have their own specially designed range of fire-surrounds, available in easy to assemble and install kit form. All components are ready finished and require no further painting to complete. Please see each insert product page and page 13 for details on specific fire-surrounds for each insert model.

ACR electric stoves and inserts are not only suitable for bringing style and warmth to a conventional setting, but are also ideal for heating a wide range of homes and building types.

Optional flue kit is available from the ACR Electric Stoves accessories range to complete the look of your installation. Please see page 26 for more details.

PR-600e **0.8Kw / 1.6Kw**

Electric fireplace insert with a fire-surround option featuring a reversible panel.

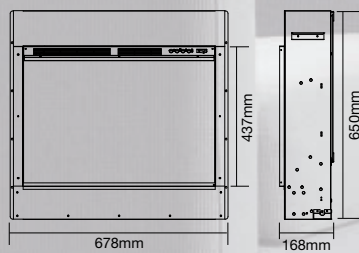

The PR-600e is the most compact of our inserts, featuring 16 different flame effects and 2 heat settings. The PR-600e can be installed into our bespoke, hand-crafted in the heart of the Midlands, Harborne Fireplace suite as featured, or installed into your own preferred setting.

Electric stoves accessories range

Our accessory has been designed exclusively to complement our electric stove range and enhance your installation. Please note these accessories are not suitable for use with either woodburning or multifuel stove applications.

BLACK GLASS HEARTHES

Our 6mm thick glass hearth plates are the ideal way to display your electric stove. With a deep gloss black finish, there are options for either a corner setting, or a versatile rectangular format that can be sited against a wall or used free-standing. Our glass hearths are suitable for use with all stoves in our electric range.

NEO BLACK GLASS TOP PLATE

With a deep gloss black finish, our 6mm thick glass top plate adds a distinctive finish to the NEO electric stoves.

ELECTRIC STOVE FLUE PIPE

Specially designed flue pipe kit to further enhance your stoves installation and to create a convincing setting. Straightforward magnetic installation, suitable for all ACR electric stoves.

MALVERN LOG STORE BASE

Add a log-store base section to the standard Malvern electric stove for an authentic woodburning stove look.

Glass hearth plate shown is also available from the ACR electric stoves accessories range.

NEO3F STORAGE CONVERSION

An attractive storage base that can be added to the NEO3F to create a NEO3C pedestal style stove.
