

Could this be the Widest 5kW Freestanding Stove?

New for 2016, the clarity-Vision is designed to give the widest width and view of the fire whilst keeping the nominal rated output at 5kW. As one of the widest 5kW stoves available in the UK, there are few rivals in this category.

Based on the width and height dimensions of its big brother the Clarity12, the depth is reduced allowing for easier insertion into shallow fireplaces or less intrusion into the room when used free-standing against a wall.

At the same time the wide firebox is retained allowing for long logs to be used.

A 5" diameter flue can be used making installation easier.
